

Reduce Payroll and Human Resource Costs With Integrated Information

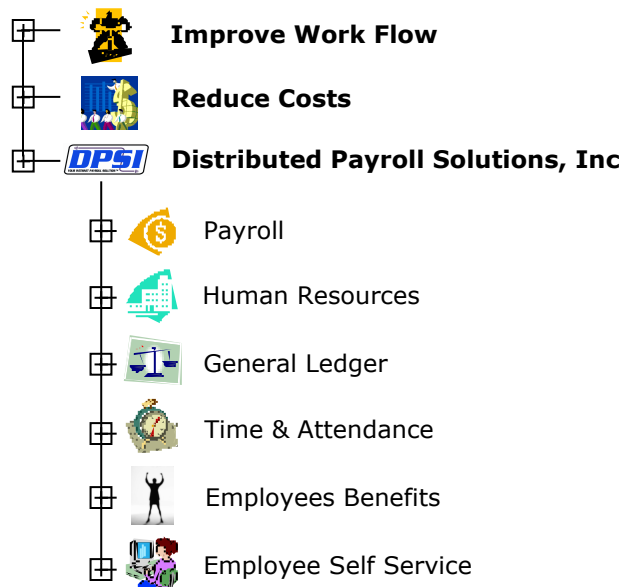

A national payroll team with the local personal touch!

The goal of DPSI is to provide a Complete Solution that will *improve workflow and reduce non-value added costs.*

To an organization like yours, time is money. DPSI's professional software, SQL/Pay™ and SQL/HR™, was designed to save you time. It was developed by individuals that have over 20 years experience implementing mission-critical business systems. Only DPSI can provide an integrated solution that brings together all the business functions touching your employees.

A PAPERLESS APPROACH TO INTEGRATION

This integrated approach provides many opportunities to reduce tasks, paperwork and costs.

Human Resources

All your Human Resource information is maintained in the same database as all your Payroll information. SQL/HR™ provides a sophisticated method for you to track detailed information about your Employees including Education, Skills, Position and Pay History, Performance Reviews, Absences, and Injuries.

General Ledger

DPSI installs your payroll GL accounts into our system. Your GL account structure can have as many levels as required for effective reporting and direct interaction with your General Ledger system.

Time & Attendance

Our Time & Attendance solutions provide you with many capabilities for managing detail data. If you already have a solution, our payroll software can accept a file of payroll data from any data collection device.
